INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/EP2004/002485

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1-9	YES
	Claims		NO
Inventive step (IS)	Claims	1-9	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-9	YES
	Claims		NO

2. Citations and explanations (Rule 70.7)

Reference is made to the following document:

D1: EP 1 069 632 A (COUTIER MOULAGE GEN IND) 17 January 2001 (2001-01-17).

Document D1 is considered the prior art closest to the subject matter of claim 1. It discloses (the reference signs between parentheses relate to D1): a device for attaching a housing (battery 20), in particular that of a motor vehicle battery, to a support plate (*bac* 2), wherein an attachment arm (8) integral with the plate comprises an attachment part (9) which attaches the housing to the support plate.

The subject matter of claim 1 therefore differs from the known document D1 in that the attachment part is a separate, elastically bent part and inserted in a tensed manner between the wall of the housing positioned on the support plate and a retaining edge protruding vertically upward therefrom.

The subject matter of claim 1 is therefore novel (PCT Article 33(2)).

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

The problem to be solved by the present invention is therefore understood to lie in the fact that with the attachment device of document D1, an involuntary movement of the attachment arm (8), as a result of which the connection between the attachment part (9) and the housing (battery 20) may be released or unlocked, remains possible, which is very unsafe.

The solution to the above problem, as proposed in claim 1 of the present application, involves an inventive step (PCT Article 33(3)), for the following reasons:

The structure of the attachment part and its connection to the support plate and the housing secures the locking mechanism against involuntary unlocking.

Claims 2 to 9 are dependent on claim 1 and therefore likewise meet the PCT requirements for novelty and inventive step.
